2025年5月1日(ニューヨーク 発): アメリカン・インターナショナル・グループ・インク(ニューヨーク証券取引所銘柄: AIG)は本日、2025年3月31日に終了した第1四半期の決算を発表しました。

AIGの会長 兼 最高経営責任者(CEO)であるピーター・ザッフィーノは次のように述べました。「2025年、AIGは素晴らしいスタートを切りました。大規模自然災害が業界全体に大きな損失をもたらした厳しい四半期であったにもかかわらず、AIGは非常に好調な業績を達成しました。これは、AIGの専門的な引受業務の知見と戦略的な再保険活用の有効性を示すものであり、年末までの期間も業績予想の範囲内で推移する見込みです。さらに、AIGのポートフォリオの品質が優れていることを反映して、AIGの第1四半期の調整済み事故年度コンバインド・レシオは、金融危機以降で最も優れた結果となりました。

正味収入保険料は比較可能ベース†で前年同期比8%増となり、トップラインは目覚ましい成長を遂げました。グローバル・コマーシャルは10%の伸び†を示し、88%という高い更改率を維持し、11億ドルという非常に好調でバランスのとれた新規契約を獲得しました。ノースアメリカ・コマーシャル・インシュアランスは14%†の伸び、インターナショナル・コマーシャル・インシュアランスは8%†の伸びとなりました。

AIGは規律ある資本管理戦略を継続し、様々な面で第1四半期の進捗を加速させました。22億ドルの自社 株買いと2億3,400万ドルの配当を含め、25億ドルの資本を株主に還元しました。当四半期末の負債総資 本比率17.1%、親会社流動資産49億ドルとなりました。

インベスター・デーでお伝えしたとおり、AIGの取締役会は、2025年第2四半期から四半期配当を12.5%引き上げて1株当たり0.45ドルとすることを承認しました。これは、AIGの将来の収益力に対する自信を反映したもので、3年連続で2桁の増配となります。

マクロ経済および地政学的な環境全般は依然として不透明ですが、AIGはグローバルに分散化されたポートフォリオ、規律ある引受業務、そして強靭なバランスシートを基盤として、強い立場でこれらの課題を

乗り越えています。世界中の献身的な社員たちは、最高の品質での目標達成に尽力し続けています。

2025年第1四半期のAIG普通株主帰属純利益は6億9,800万ドル(希薄化後普通株式1株当たり1.16ドル)となり、前年同期の12億ドル(希薄化後普通株式1株当たり1.74ドル)から減少しました。前年同期比での減少は、主に、コアブリッジ・ファイナンシャル(コアブリッジ)非連結化の前年同期に計上された、希薄化後普通株式1株当たり0.61ドルの純利益によるものです。

2025年第1四半期のAATIは、前年同期の8億6,200万ドル (希薄化後普通株式1株当たり1.25ドル) に対し、7億200万ドル (希薄化後普通株式1株当たり1.17ドル) となりました。これは、大規模自然災害損失の増加により損害保険事業の保険引受収益が減少したことを反映していますが、前年同期の好調な業績と経費率の低下、およびその他の事業の業績改善により一部相殺されました。

2025年第1四半期の正味投資収益合計は11億ドルで、前年同期の9億7,900万ドルから13%増加しました。これは主に、コアブリッジにおけるAIGの株式の公正価値の変動と配当収益、売却可能な満期固定証券からの収益増加、ならびに投資費用の減少によるものですが、短期投資、モーゲージローン、およびその他の投資資産からの収益の減少により部分的に相殺されました。APTIベース*の正味投資収益合計は8億4,500万ドルで、前年同期と同水準でした。損害保険事業の正味投資収益は、前年同期から3%減少しました。これは主に、オルタナティブ投資およびその他の投資資産からの収益の減少によるものですが、売却可能満期固定証券の収益増加と投資費用の減少により部分的に相殺されました。

2025年第1四半期、AIGは約2,900万株に相当する22億ドルの普通株買い戻しと2億3,400万ドルの普通株配当金を通じて、約25億ドルを株主に還元しました。AIGの親会社流動資産は、2025年3月31日時点で49億ドルでした。

2025年第1四半期の自己資本利益率(ROE)およびコアオペレーティングROE*は、それぞれ6.7%と7.7%でした。2025年3月31日時点の1株当たりブック・バリューは71.38ドルで、2024年12月31日から2%増加しました。調整後1株当たり有形ブック・バリュー*は67.96ドルで、2024年12月31日から横ばいでした。2025年3月31日時点の総負債総資本比率は17.1%、総負債調整後総資本*比率は16.6%でした。

2025年5月1日、AIGの取締役会はAIGの普通株式の1株当たり0.45ドルの四半期配当金を発表しました。 配当金は、2025年6月13日の業務終了時において登録されている株主に対して2025年6月27日に支払われます。

報告セグメントの再編:2024年第4四半期に、AIGは組織構造と報告セグメントの構成を再編し、AIGの 事業管理方法、具体的には経営意思決定責任者が定期的に営業実績をレビューし、リソースを配分するレ ベルの変更を反映しました。AIGには、ノースアメリカ・コマーシャル・インシュアランス、インターナ ショナル・コマーシャル・インシュアランス、グローバル・パーソナル・インシュアランスの3つの報告 セグメントがあります。損害保険事業は、これら3つの報告セグメントおよび保険事業に関連する正味投 資収益で構成されています。過年度の開示情報は、新しい報告セグメントに合わせて修正されています。

For the first quarter of 2025, net income attributable to AIG common shareholders was \$698 million, or \$1.16 per diluted common share, compared to \$1.2 billion, or \$1.74 per diluted common share, in the prior year quarter. The year-over-year decrease was largely attributable to net income of \$0.61 per diluted common share from Corebridge Financial, Inc.'s (Corebridge), recognized in the prior year quarter, prior to Corebridge's deconsolidation.

AATI was \$702 million, or \$1.17 per diluted common share, for the first quarter of 2025, compared to \$862 million, or \$1.25 per diluted common share, in the prior year quarter, reflecting lower underwriting income in General Insurance driven by higher catastrophe losses, partially offset by more favorable prior year development and lower expense ratio as well as improved results in Other Operations.

Total net investment income for the first quarter of 2025 was \$1.1 billion, an increase of 13% from \$979 million in the prior year quarter, primarily due to change in fair value and dividend income from AIG's equity in Corebridge, higher income on available for sale fixed maturity securities and lower investment expenses, partially offset by lower income from short-term investments, mortgage loans and other invested assets. Total net investment income on an APTI basis* was \$845 million, flat compared to the prior year quarter. Net investment income attributed to General Insurance was down 3% from the prior year quarter, mainly due to lower income from alternatives and other invested assets, partially offset by higher income on available for sale fixed maturity securities and lower investment expenses.

In the first quarter of 2025, AIG returned approximately \$2.5 billion to shareholders through \$2.2 billion of common stock repurchases representing approximately 29 million shares, and \$234 million of common stock dividends. AIG Parent liquidity was \$4.9 billion as of March 31, 2025.

Return on Equity (ROE) and Core Operating ROE* were 6.7% and 7.7%, respectively, in the first quarter of 2025. Book value per share was \$71.38 as of March 31, 2025, an increase of 2% from December 31, 2024. Adjusted tangible book value per share* was \$67.96, flat from December 31, 2024. Total debt to total capital ratio at March 31, 2025 was 17.1% and total debt to total adjusted capital* ratio was 16.6%.

On May 1, 2025, the AIG Board of Directors declared a quarterly cash dividend on AIG common stock of \$0.45 per share. The dividend is payable on June 27, 2025 to stockholders of record at the close of business on June 13, 2025.

Realignment of Reportable Segments: In the fourth quarter 2024, AIG realigned its organizational structure and the composition of its reportable segments to reflect changes in how AIG manages its operations, specifically the level at which its chief operating decision makers regularly review operating results and allocate resources. AIG has three reportable segments: North America Commercial, International Commercial and Global Personal. General Insurance consists of our three reportable segments and the net investment income related to our insurance operations. Prior years' presentations have been revised to conform to the new reportable segments.

COMMENT ON REGULATION G AND NON-GAAP FINANCIAL MEASURES

Throughout this press release, including the financial highlights, AIG presents its financial condition and results of operations in the way it believes will be most meaningful and representative of its business results. Some of the measurements AIG uses are "Non-GAAP financial measures" under SEC rules and regulations. GAAP is the acronym for generally accepted accounting principles in the United States. The non-GAAP financial measures AIG presents are listed below and may not be comparable to similarly-named measures reported by other companies. The reconciliations of such measures to the most comparable GAAP measures in accordance with Regulation G are included within the relevant tables attached to this news release or in the First Quarter 2025 Financial Supplement available in the Investors section of AIG's website, www.aig.com.

Unless otherwise mentioned or unless the context indicates otherwise, we use the terms "AIG," "we," "us" and "our" to refer to American International Group, Inc., a Delaware corporation, and its consolidated subsidiaries.

AIG uses the following operating performance measures because AIG believes they enhance the understanding of the underlying profitability of continuing operations and trends of AIG's segments. AIG believes they also allow for more meaningful comparisons with AIG's insurance competitors. When AIG uses these measures, reconciliations to the most comparable GAAP measure are provided on a consolidated basis.

Book value per share, excluding investments related cumulative unrealized gains and losses recorded in Accumulated other comprehensive income (loss) (AOCI) adjusted for the cumulative unrealized gains and losses related to Fortitude Re funds withheld assets (collectively, Investments AOCI) (Adjusted book value per share) is used to show the amount of our net worth on a per share basis after eliminating the fair value of investments that can fluctuate significantly from period to period due to changes in market conditions. In addition, we adjust for the cumulative unrealized gains and losses related to Fortitude Re funds withheld assets held by AIG in support of Fortitude Re's reinsurance obligations to AIG (Fortitude Re funds withheld assets) since these fair value movements are economically transferred to Fortitude Re. Adjusted book value per share is derived by dividing total AIG common shareholders' equity, excluding Investments AOCI (AIG adjusted common shareholders' equity) by total common shares outstanding.

Book Value per share, excluding Investments AOCI, Goodwill, Value of business acquired (VOBA), Value of distribution channel acquired (VODA) and Other intangible assets (Adjusted tangible book value per share) is used to provide a useful measure of the realizable shareholder value on a per share basis after eliminating the fair value of investments that can fluctuate significantly from period to period due to changes in market conditions and Fortitude Re funds withheld assets since these fair value movements are economically transferred to Fortitude Re. Adjusted tangible book value per share is derived by dividing AIG adjusted common equity, excluding intangible assets, (AIG adjusted tangible common shareholders' equity) by total common shares outstanding.

Book value per share, excluding Investments AOCI, deferred tax assets (DTA) and AIG's ownership interest in Corebridge (Core operating book value per share) is used to show the amount of our net worth on a per share basis after eliminating Investments AOCI, DTA and AIG's ownership interest in Corebridge. We believe this measure is useful to investors because it eliminates the fair value of investments that can fluctuate significantly from period to period due to changes in market conditions. We also exclude the portion of DTA representing U.S. tax attributes related to net operating loss carryforwards (NOLs), corporate alternative minimum tax credits (CAMTCs) and foreign tax credits (FTCs) that have not yet been utilized. Amounts for interim periods are estimates based on projections of full-year attribute utilization. As NOLs, CAMTCs and FTCs are utilized, the corresponding portion of the DTA utilized is included. We exclude AIG's ownership interest in Corebridge since it is not a core long-term investment for AIG. Core operating book value per share is derived by dividing total AIG common shareholders' equity, excluding Investments AOCI, DTA and AIG's ownership interest in Corebridge (AIG core operating shareholders' equity) by total common shares outstanding.

Total debt and preferred stock to total adjusted capital ratio is used to show the AlG's debt leverage adjusted for Investments AOCI and is derived by dividing total debt and preferred stock by total capital excluding Investments AOCI (Total adjusted capital). We believe this measure is useful to investors because it eliminates items that can fluctuate significantly from period to period due to changes in market conditions. In addition, we adjust for the cumulative unrealized gains and losses related to Fortitude Re funds withheld assets since these fair value movements are economically transferred to Fortitude Re.

Return on equity – Adjusted after-tax income excluding Investments AOCI (Adjusted return on equity) is used to show the rate of return on common shareholders' equity excluding Investments AOCI. We believe this measure is useful to investors because it eliminates the fair value of investments which can fluctuate significantly from period to period due to changes in market conditions. Adjusted return on equity is derived by dividing actual or, for interim periods, annualized adjusted after-tax income attributable to AIG common shareholders by average AIG adjusted common shareholders' equity.

Return on equity – Adjusted after-tax income excluding Investments AOCI, DTA and AIG's ownership interest in Corebridge (Core operating return on equity) is used to show the rate of return on common shareholders' equity excluding Investments AOCI, DTA and AIG's ownership interest in Corebridge. We believe this measure is useful to investors because it eliminates the fair value of investments that can fluctuate significantly from period to period due to changes in market conditions. We also exclude the portion of DTA representing U.S. tax attributes related to NOLs, CAMTCs and FTCs that have not yet been utilized. Amounts for interim periods are estimates based on projections of full-year attribute utilization. As NOLs, CAMTCs and FTCs are utilized, the corresponding portion of the DTA utilized is included. We exclude AIG's ownership interest in Corebridge since it is not a core long-term investment for AIG. We believe this metric will provide investors with greater insight as to the underlying profitability of our property and casualty business. Core operating return on equity is derived by dividing actual or, for interim periods, annualized adjusted after-tax income attributable to AIG common shareholders by average AIG core operating shareholders' equity.

Adjusted Pre-tax Income (APTI) is derived by excluding the items set forth below from income from continuing operations before income tax:

- changes in the fair values of equity securities, AIG's investment in Corebridge and gain on sale of shares;
- net investment income on Fortitude Re funds withheld assets;
- net realized gains and losses on Fortitude Re funds withheld assets;
- loss (gain) on extinguishment of debt;
- all net realized gains and losses except earned income (periodic settlements and changes in settlement accruals) on
 derivative instruments used for non-qualifying (economic) hedging or for asset replication. Earned income on such
 economic hedges is reclassified from net realized gains and losses to specific APTI line items based on the economic risk
 being hedged (e.g. net investment income);
- income or loss from discontinued operations;
- net loss reserve discount benefit (charge);
- net results of businesses in run-off;
- non-operating pension expense;
- net gain or loss on divestitures and other;
- non-operating litigation reserves and settlements;
- restructuring and other costs related to initiatives designed to reduce operating expenses, improve efficiency and simplify our organization;
- the portion of favorable or unfavorable prior year reserve development for which we have ceded the risk under retroactive reinsurance agreements and related changes in amortization of the deferred gain;
- integration and transaction costs associated with acquiring or divesting businesses;
- losses from the impairment of goodwill;
- non-recurring costs associated with the implementation of non-ordinary course legal or regulatory changes or changes to accounting principles; and
- income from elimination of the international reporting lag.

Adjusted After-tax Income attributable to AIG common shareholders (AATI) is derived by excluding the tax effected APTI adjustments described above, dividends on preferred stock and preferred stock redemption premiums, noncontrolling interest on net realized gains (losses), other non-operating expenses and the following tax items from net income attributable to AIG:

- deferred income tax valuation allowance releases and charges;
- changes in uncertain tax positions and other tax items related to legacy matters having no relevance to our current businesses or operating performance; and
- net tax charge related to the enactment of the Tax Cuts and Jobs Act.

See page 15 for the reconciliation of Net income attributable to AlG to Adjusted After-tax Income Attributable to AlG.

Ratios: We, along with most property and casualty insurance companies, use the loss ratio, the expense ratio and the combined ratio as measures of underwriting performance. These ratios are relative measurements that describe, for every \$100 of net premiums earned, the amount of losses and loss adjustment expenses (which for General Insurance excludes net loss reserve discount), and the amount of other underwriting expenses that would be incurred. A combined ratio of less than 100 indicates underwriting income and a combined ratio of over 100 indicates an underwriting loss. Our ratios are calculated using the relevant segment information calculated under GAAP, and thus may not be comparable to similar ratios calculated for regulatory reporting purposes. The underwriting environment varies across countries and products, as does the degree of litigation activity, all of which affect such ratios. In addition, investment returns, local taxes, cost of capital, regulation, product type and competition can have an effect on pricing and consequently on profitability as reflected in underwriting income and associated ratios.

Accident year loss and Accident year combined ratios, as adjusted (Accident year loss ratio, ex-CAT and Accident year combined ratio, ex-CAT): both the accident year loss and accident year combined ratios, as adjusted, exclude catastrophe losses (CATs) and related reinstatement premiums, prior year development, net of premium adjustments, and the impact of reserve discounting. Natural catastrophe losses are generally weather or seismic events, in each case, having a net impact on AIG in excess of \$10 million and man-made catastrophe losses, such as terrorism and civil disorders that exceed the \$10 million threshold. We believe that as adjusted ratios are meaningful measures of our underwriting results on an ongoing basis as they exclude catastrophes and the impact of reserve discounting which are outside of management's control. We also exclude prior year development to provide transparency related to current accident year results.

Underwriting ratios are computed as follows:

- a. Loss ratio = Loss and loss adjustment expenses incurred ÷ Net premiums earned (NPE)
- b. Acquisition ratio = Total acquisition expenses ÷ NPE
- c. General operating expense ratio = General operating expenses ÷ NPE
- d. Expense ratio = Acquisition ratio + General operating expense ratio

- e. Combined ratio = Loss ratio + Expense ratio
- f. CATs and reinstatement premiums ratio = [Loss and loss adjustment expenses incurred (CATs)] ÷ [NPE +/(-) Reinstatement premiums related to catastrophes] Loss ratio
- Accident year loss ratio, as adjusted (AYLR ex-CAT) = [Loss and loss adjustment expenses incurred CATs PYD] ÷ [NPE +/(-) Reinstatement g. premiums related to catastrophes +/(-) Prior year premiums + Adjustment for ceded premium under reinsurance contracts related to prior accident years]
- h. Accident year combined ratio, as adjusted (AYCR ex-CAT) = AYLR ex-CAT + Expense ratio
- Prior year development net of reinsurance and prior year premiums ratio = [Loss and loss adjustment expenses incurred CATs PYD] ÷ [NPE i. +/(-) Reinstatement premiums related to catastrophes +/(-) Prior year premiums] Loss ratio CATs and reinstatement premiums ratio.

Results from discontinued operations, including Corebridge, are excluded from all of these measures.
